Australian secondary school students’ use of tobacco, alcohol, and over-the-counter and illicit substances in 2008

Report

Report prepared for:
Drug Strategy Branch
Australian Government Department of Health and Ageing

Report prepared by:
Victoria White
Geoff Smith

September 2009

Centre for Behavioural Research in Cancer
Cancer Control Research Institute
The Cancer Council Victoria
Acknowledgments

The Centre for Behavioural Research in Cancer at The Cancer Council Victoria gratefully acknowledges the cooperation and assistance of the following people and organisations in the running of this survey:

All of the students who participated in the survey:
   Staff of the participating schools
   State Departments of Education
   State and Diocese Catholic Education Offices
   State Associations of Independent Schools

The following organisations helped fund and organise the smooth running of the survey in their individual States or Territories:
   ACT Health, Epidemiology Branch, Population Health Division
   Australian Government Department of Health and Ageing
   The Cancer Council South Australia
   The Cancer Council Tasmania
   The Cancer Council Victoria
   Drug and Alcohol Services Council, SA
   Department of Education, Tasmania
   Department of Human Services, Victoria - Drug Treatment Services,
   Population Health Unit, Department of Health and Human Services, Tasmania
   Premier’s Physical Activity Council, Tasmania,
   Health Department of Western Australia – Monitoring, Evaluation and Research
   Branch, Drug and Alcohol Office
   Northern Territory Government, Department of Health and Community Services-
   Alcohol and Other Drugs Program
   NSW Health Department, Health Survey Program, Centre for Epidemiology and
   Research
   Queensland Cancer Fund
   Queensland Health

The following people co-ordinated the survey in their State or Territory and/or organised data collection:
   Simeon Jones, Samantha Williams, The Cancer Council South Australia
   Cathy Baker, Epidemiology Branch, Population Health Division, ACT Health
   Margo Barr and Matthew Gorringe, Health Survey Program, Centre for Epidemiology
   and Research, NSW Health
   Chris Moon and Tania Davison, Alcohol and Other Drugs Program, NT Department of
   Health and Community Services
   Catherine McGregor and Rachelle Kalic, Monitoring, Evaluation and Research Branch,
   Drug and Alcohol Office, Western Australia
   Glen Paley and Kay Gunn, The Cancer Council Tasmania
   Jenny Madden and David Knobel, Community Solutions, Queensland
   Ron Clarke, McNair Ingenuity Research, NSW

Suzanna Vidmar, Clinical Epidemiology and Biostatistics Unit, Royal Children’s Hospital,
Victoria, advised on all aspects of sampling.

Thanks also to all the research assistants who administered the survey to students throughout Australia.

List of Tables ................................................................................................5

List of Figures...............................................................................................8

Executive Summary .....................................................................................9
The 2008 Australian Secondary Students Alcohol and Drug Survey ......................... 9

1. Introduction................................................................................................12
The Australian Secondary Students’ Alcohol and Drug Survey................................. 12

2. Method......................................................................................................13
2.1 Sample selection........................................................................................13
2.2 Procedure ................................................................................................13
2.3 Questionnaire............................................................................................14
2.4 Data entry and cleaning........................................................................... 15
2.5 Sample size ...............................................................................................15
2.6 Data analyses ...........................................................................................16
2.7 Definitions of substances .........................................................................17
2.8 Definitions of frequency of use of different substances...............................17

3. Tobacco use among Australian secondary students ....................20
3.1 How many Australian secondary school students were involved with smoking cigarettes in 2008? ..........................................................20
3.2 What brands of cigarettes do students smoke and how do they access them? .........23
3.3 How easy do students think it is to purchase cigarettes? ..............................26
3.4 How do students see themselves in relation to smoking? ............................28
3.5 How likely are students to smoke in the next year? ....................................31
3.6 Has the smoking behaviour of secondary students changed over time? ...........32

4. Alcohol use among Australian secondary students ......................37
4.1 How many Australian secondary school students were involved with drinking alcohol in 2008? ..........................................................37
4.2 Type of alcohol consumed........................................................................39
4.3 Access to alcohol......................................................................................40
4.4 Who students ask to buy alcohol for them...............................................41
4.5 Places where students drink......................................................................42
4.6 Adult supervision of student drinking, location of supervised drinking and source of alcohol when drinking was supervised........................................42
4.7 Relationship between sources of alcohol, place alcohol is consumed, and drinking behaviour .................................................................44
4.8 How do students see themselves in relation to drinking alcohol? ..................46
4.9 Has the drinking behaviour of secondary students changed over time? ...........47
5. Use of over-the-counter and illicit substances among 
Australian secondary students ...................................................... 51
  5.1 Analgesics .................................................................................................................. 51
  5.2 Tranquillisers .............................................................................................................. 56
  5.3 Cannabis ...................................................................................................................... 58
  5.4 Inhalants ....................................................................................................................... 62
  5.5 Hallucinogens .............................................................................................................. 64
  5.6 Amphetamines ............................................................................................................. 65
  5.7 Steroids ......................................................................................................................... 68
  5.8 Opiates ........................................................................................................................ 69
  5.9 Cocaine ......................................................................................................................... 71
  5.10 Ecstasy ......................................................................................................................... 73
  5.11 Use of any illicit substance .......................................................................................... 75
  5.12 Use of any illicit substance excluding cannabis ............................................................ 76
  5.13 Poly-substance use ...................................................................................................... 77

6. Comparisons of the types of substances used by students in 2008 ................................................................. 78

7. Lessons about use of tobacco, alcohol and illicit substances in the previous school year ................................ 80

Appendix 1: Questionnaire – Northern Territory .......................................................... 81

Appendix 2: Data matters .................................................................................................. 96
  Coding and editing of data ............................................................................................... 96
  Data Analyses Details ..................................................................................................... 96

Appendix 3: 95% Confidence intervals .............................................................................. 98

Appendix 4: Substances used by secondary students in 2005 and 2008 ................................................................. 99
List of Tables

Table 3.1: Lifetime experience and current cigarette smoking by secondary school students according to age and gender#, Australia, 2008 (%) 20
Table 3.2: Smoking behaviours of secondary school students who smoked in the week before the survey, by age and gender (base: current smokers), Australia, 2008 22
Table 3.3: Preferred brands by those who smoked in the past week, †# Australia, 2008 (%) 24
Table 3.4: Percentage of current smokers obtaining their last cigarette from different pack sizes, Australia, 2008 24
Table 3.5: Percentage of current smokers^ obtaining their last cigarette from different sources *# Australia, 2008 25
Table 3.6: Percentage* of current smokers^ who bought or did not buy their last cigarette, Australia, 2008 (%) 26
Table 3.7: Percentage of students at each age believing it would be easy or very easy for them to purchase cigarettes themselves or by getting someone else to buy cigarettes for them, Australia, 2008. 26
Table 3.8: Percentage of students who are current smokers# or not in each age believing it would be easy or very easy for them to purchase cigarettes themselves or by getting someone else to buy cigarettes for them, Australia, 2008 (%) 27
Table 3.9: Self-description of smoking status by age and gender for all students surveyed in Australia, 2008 29
Table 3.10: Percentage of students^ in each self description of smoking status category indicating they had been smoking in each time period and average number of cigarettes smoked per week by current smokers in each group, Australia, 2008# 30
Table 3.11: Students’ intention to smoke in the next 12 months, Australia, 2008# 31
Table 3.12: Intention to smoke in the next 12 months among current smokers, Australia, 2008 (%) 32
Table 3.13: Percentage of students involved with tobacco use at different levels in 2002, 2005 and 2008, Australia 34
Table 4.1: Percentage of students reporting different levels of drinking experience by age and gender, Australia, 2008 37
Table 4.2: Alcohol consumption among current drinkers by age and gender, Australia, 2008 38
Table 4.3: Drink types most commonly consumed by those who drank alcohol in the past week,*†# Australia, 2008 39
Table 4.4: Most common sources of alcohol for those who drank alcohol in the past week,*# Australia, 2008 40
Table 4.5: Percentage of current drinkers who had someone else buy alcohol for them reporting that different people bought the alcohol#, Australia, 2008 41
Table 4.6: Most usual places for drinking by students who had consumed alcohol in the previous week, Australia, 2008 42
Table 4.7: Percentage of current drinkers who consumed their last alcoholic drink under adult supervision#, Australia, 2008 43
Table 4.8: Percentage of current drinkers# drinking at home, at a party or at a friends’ house who consumed their last alcoholic drink under adult supervision, Australia, 2008 43
Table 4.9: Average number of drinks# consumed per week among younger (12- to 15-year-olds), older (16- to 17-year-olds) and all current drinkers by source of alcohol and where alcohol was consumed, Australia, 2008

Table 4.10: Self-description of drinking behaviour by age and gender for all Australian secondary school students, Australia, 2008

Table 4.11: Where current drinkers using the label ‘non-drinker’, ‘occasional drinker’ and ‘party drinker’ consume alcohol and how they obtain it, Australia, 2008

Table 4.12: Proportion of students using alcohol in their lifetime, in the previous month, in the previous week; proportion of all drinkers drinking at risky^ levels and proportion of current drinkers drinking at risky^ levels in 2002, 2005 and 2008, Australia

Table 4.13: Percentage of male and female current drinkers aged 12–15 and 16–17 years drinking spirits, beer and premixed drinks in 2002, 2005 and 2008 (students who indicated more than one drink type excluded from analyses), Australia

Table 5.1: Analgesics: Percentage of students in each age and gender grouping using analgesics in each recency category, Australia 2008

Table 5.2: The main reasons for using the last analgesic among students using analgesics in the past year, Australia 2008*

Table 5.3: Most common sources of analgesics for those students who used analgesics in the past year, Australia 2008*

Table 5.4: Percentage of students using analgesics in their lifetime, in the past month or in the past week in 2002, 2005 and 2008, Australia

Table 5.5: Tranquillisers: Percentage of students in each age and gender grouping using tranquillisers in each recency category, Australia 2008

Table 5.6: Percentage of students using tranquillisers in their lifetime, in the past month or in the past week in 2002, 2005 and 2008, Australia

Table 5.7: Cannabis: Percentage of students in each age and gender grouping using cannabis in each recency category, Australia 2008.

Table 5.8: Percentage of students using cannabis in their lifetime, in the past month or in the past week in 2002, 2005 and 2008, Australia

Table 5.9: Inhalants: Percentage of students in each age and gender grouping using inhalants in each recency category, Australia 2008

Table 5.10: Hallucinogens: Percentage of students in each age and gender grouping using hallucinogens in each recency category, Australia 2008

Table 5.11: Percentage of students using hallucinogens, in their lifetime and in the past month in 2002, 2005 and 2008, Australia

Table 5.12: Amphetamines: Percentage of students in each age and gender grouping using amphetamines in each recency category, Australia 2008

Table 5.13: Percentage of students using amphetamines in their lifetime and in the past month in 2002, 2005 and 2008, Australia

Table 5.14: Steroids: Percentage of students in each age and gender group reporting use of steroids without a doctor’s prescription in an attempt to improve sporting ability, increase muscle size or improve appearance, by age and gender, Australia 2008

Table 5.15: Opiates: Percentage of students in each age and gender grouping using opiates other than for medical reasons in each recency category, Australia 2008

Table 5.16: Percentage of students who had used opiates in their lifetime or in the past month in 2002, 2005 and 2008, Australia

Table 5.17: Cocaine: Percentage of students in each age and gender grouping using cocaine in each recency category, Australia 2008

List of Figures

Figure 3.1: Average number of cigarettes consumed per week among daily smokers and non-daily current smokers at each age group, Australia, 2008# 23

Figure 3.2: Percentage of current smokers aged 12 to 15 years and 16 to 17 years believing it would be easy for them to buy cigarettes themselves or to get someone else to buy cigarettes for them, by whether they bought their last cigarette or not 28

Figure 3.3: Trends in proportion of current (smoked in past week) and committed smoking (smoked on 3 or more days of past week) among 12- to 15-year-old students, 1984-2008 33

Figure 3.4: Trends in proportion of current smoking (smoked in past week) and committed smoking (smoked on 3 or more days of past week) among 16- to 17-year-old students, 1984-2008 33

Figure 3.5: Proportion of current smokers aged 12–15 (left) and 16–17 (right) buying cigarettes for themselves in each survey year from 1987 to 2008 35

Figure 3.6: Proportion of current smokers aged 12–15 years (left) and 16–17 years (right) getting someone else to buy cigarettes for them in each survey year from 1990 to 2008 36

Figure 4.1: The average number of drinks per week# for 12- to 15-year-old current drinkers (left) and 16- to 17-year-old current drinkers (right) who drank their last drink at a party, according to source of alcohol 45

Figure 4.2: Proportion of 12- to 15-year-olds drinking in the week before the survey (current drinkers) and proportion drinking at levels that could lead to short-term harm (risky drinking), 1984-2008 48

Figure 4.3: Proportion of 16- to 17-year-olds drinking in the week before the survey (current drinkers) and proportion drinking at levels that could lead to short-term harm (risky drinking), 1984-2008 48

Figure 5.1: Percentage of male and female students in each age group using analgesics 10 or more times in the past year, Australia 2008 (%) 52

Figure 5.3: How cannabis is used, who cannabis is used with and where cannabis is used, among students who have used cannabis regularly or occasionally in the past year, Australia 2008 (%) 60

Figure 5.4: Proportion of all male and female students in each age group who used inhalants 10 or more times in the year before the survey, Australia 2008 (%) 63

Figure 6.1: Percentage of students who had ever used any licit or illicit substance, Australia 2008 78

Figure 6.2: Percentage of students who had used any licit or illicit substance in the past month, Australia 2008 79
